# SYNMEC

The world top Manufacturer for Grain Cleaning Solutions  
Adviser for Seed Processing

## APPLICATION

The slope elevator is used to transport the seed or other materials to a certain height with zero damage, when processing seeds or other dry materials.

It is very suited for a broad range of free flowing products in the grain, food, agriculture, pharmaceutical, cosmetic, chemical industry, such as beans, peanuts, raisin, dry vegetables and fruits, confectionary, chemicals and other granules.

- Zero damage
- High-efficiency
- Simple operation
- Only 5 tons/h capacity available

The Slope Elevator belt is rather soft which results in extremely eliminating the damage. Also the sidewall and baffle on the slope elevator can prevent falling and sliding the lifting materials.

The motor reducer of the slope elevator is used to keep the elevator with a stable speed, in which way the materials can be transferred sound and safe.

## Photos Of Slope Elevator

We can make different color (green, white, gray or others), length, lifting height according to different requirement of clients.

How it work with the gravity separator
